

Patent claims

1. Guide with zero-point resetting in the region and
on the path along a spherical surface,
5 characterized in that the base (20) is connected
to plate (30), the base (20) comprising a pair of
bases (20, 20') firmly connected to each other via
plate (30), to whose fixing points (2', 2'') at
least two equally long connections (10', 10'') are
10 fixed such that they can move, to whose other ends
(3', 3'') there is fixed a carrier (28) which
holds a load (40) with the weight G.
2. Guide with zero-point resetting according to Claim
15 1, characterized in that between base (20) and
carrier (28) there is arranged at least one
intermediate carrier (21), which comprises a pair
of intermediate carriers (21, 21') firmly
connected to each other by means of a connecting
20 web (27), the intermediate carrier (21) being
connected to the base (20) by means of at least
two equally long connections (10', 10'') via
fixing points (2, 2') and being connected to the
carrier (28) via at least two equally long
25 connections (10, 10') via fixing points (3, 3').
3. Guide with zero-point resetting according to one
of the preceding claims, characterized in that the
base (20), the carrier (28) and intermediate
30 carrier (21) are annular and arranged
concentrically.
4. Guide with zero-point resetting according to
Claims 1 and 2, characterized in that the base
35 (20), the carrier (28) and intermediate carrier
(21) are shaped as desired.

5. Guide with zero-point resetting according to Claims 1 and 2, characterized in that the base (20), the carrier (28) and intermediate carrier (21) are arranged as desired.
